Trips   Albums   Messages   Account

A trip is created by selecting a start and destination location. For trips that will have multiple segments, each segment is managed independently.Expected start time for each segment may also be entered here. If entered, the app will attempt to calculate the arrival times for each destination.
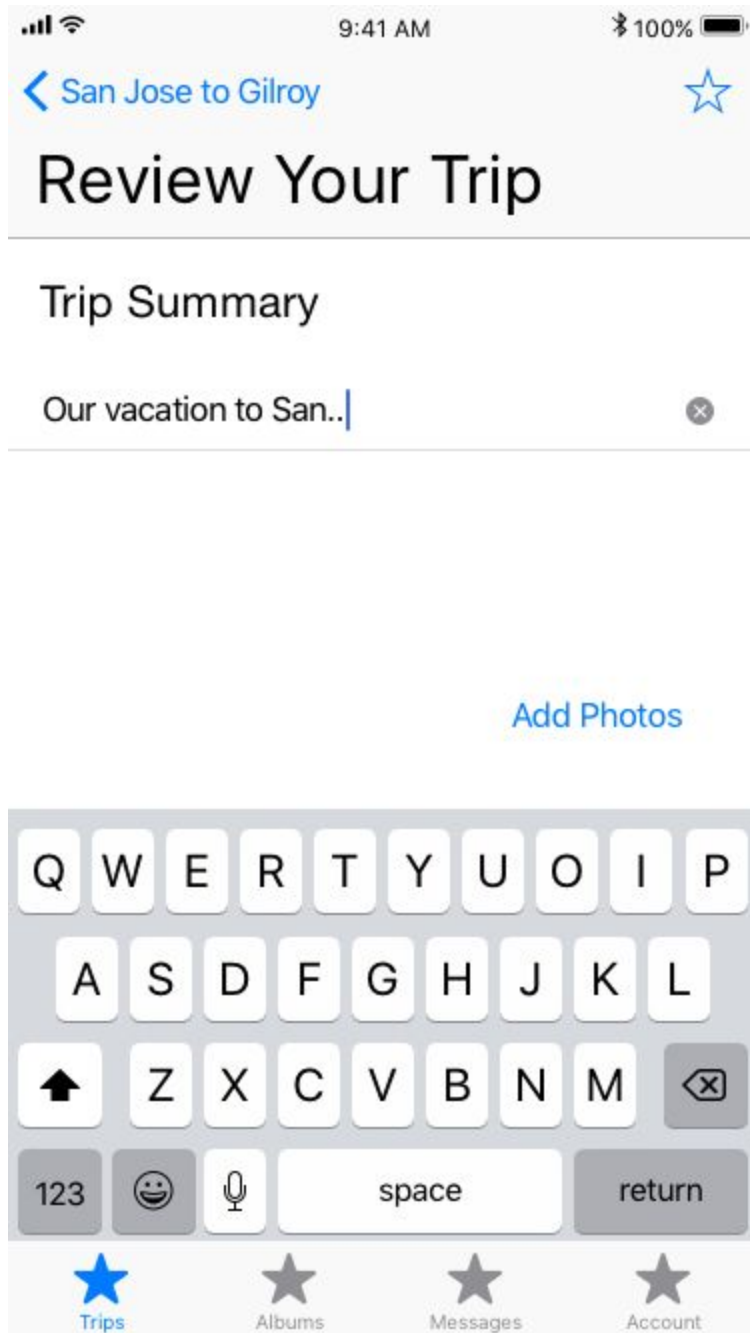

A push notification will be provided to remind users of their upcoming trip.

For each segment of a trip, users can select the types of stops they are interested in viewing. Stops include gas stations, hotels, food & drink, amusement, camping, and sightseeing.

Once the type of stop(s) are selected, the map is updated to display the matching available stops. For each annotation in the map there is a corresponding view in the scroll view at the bottom of the screen which lists information and reviews about that stop.

Users may write a summary and/or review of their trip to share with other users or to just keep as a personal diary.
